This is the forth group milestone for the Project.

Based on your data analysis in Week 7, present the **requirements** and initial **design proposal** for your project using personas and scenarios.

You will present your responses during tutorial in Week 10. The slide deck will consist of **a minimum of 4 slides**, one per point:

1. A brief summary of the **focus** of your project, in case the audience has forgotten.
2. Who are the **2 key personas** you are designing for?
3. What is one **current** use scenario based on your **analysis** in Week 7?
   *You should focus your presentation on just **one** (most interesting) persona for this **one** scenario. However, you should incorporate **both** key personas and their respective scenarios into your final design proposal.*
4. What is your **proposed** use scenario (your proposed design)?
   This should build on the current use scenario you presented above, so that we we can make a comparison.

Upload your slides to the Canvas submission folder **before your tutorial slot time**. The filename for your slides is TWX-YY-Week10.pptx (where TWX-YY is your group name, e.g., TW1-01 for Tutorial 1 Group 1). You must present using the slides as uploaded. **Only one member of the team should upload the slides.**

Q2)

The two key personas who will be using our system are the active persona (The Organiser) and the passive persona (The Follower). As the name suggests, The Organiser is the roommate who takes responsibility for organising and managing the logistics of shared living. The active persona will use tools (mental notes, paper records, or digital records) to ensure fair splitting of bills and chores to keep the household running smoothly. On the flipside, The Follower is the roommate who relies on others to organise shared tasks and responsibilities. They are characterised by their low initiative, their want to fulfill their responsibilities with minimal effort and to avoid situations that might cause social tension.

Analysing the pain points of the two key personas with current solution, we see that for The Organiser, their frustrations lie in the need to constantly remind others about the distribution of expenses and chores, the feeling of being burdened with the task of being the manager for the household and having to spend time outside work, study and hobby to spend on household logistics which often goes under-appreciated. Furthermore, since current systems, such as notes, chat and spreadsheet are fragmented and messy, which leads to a greater loss of time. Whereas, for The Follower, unclear expectations and scattered information are key pain points.

Shared specifics:

Age: 20 - 30
Occupation: Students, young professionals
Co-living in HDB/Condo with 1-4 more roommates

Specifics of The Organiser:

High tech familiarity and uses apps like Telegram, Notes, Excel / Sheets / Notion to keep track of finances
Feels responsible for maintaining the household logistics
Frustrated when others do not contribute equally
Prefers structured systems
Wants fairness, transparency and efficiency
Takes initiative and remind others of their responsibilities and schedules
Tracks shared expenses
Assigns chores and responsibilities

Needs:

- Reduce coordination effort
- Increase accountability
- Maintain social harmony

Pain Points:

- Fragmentation : Has to use multiple tools - Telegram to remind and communicate, Excel to track finances, Calendar to set deadlines.
- Lack of trackability: Hard to track who has / has not done tasks
- Social friction: Feels socially awkward chasing roommates and having to constantly remind them
- Mental load: Needs to dedicate a lot of their time and cognitive capacity behind household logistics

How our solution helps:

- Centralised dashboard gets rid of the fragmentation, can track bills, deadlines, chores and announcements in one place
- Automated reminders reduces the need to constantly nag roommates
- Transparent tracking makes trackability easier

Specifics of The Follower:

- Moderate tech familiarity - uses messaging apps but not productivity tools
- Values convenience over structure
- Are low engagement
- Responds when prompted but rarely takes initiative on their own

- Forgets about bills or chores unless reminded
- Relies on others for the logistics

Needs:
- Minimal effort interactions
- Clear instructions
- Low social friction

Pain points:
- Hard-to-access information: Messages are buried in group chats.
- Lack of clarity: Does not know what they are responsible for
- Social friction: Feels awkward due to being constantly reminded of things by their roommates

How our solution helps:
- The centralised dashboard shows what task they have on their plate
- Automated reminders give them non-intrusive and non-personal reminders about tasks and bills without the social awkwardness
- Clear accountability and transparent tracking reduces ambiguity about task distribution without confrontation.

REVISED PERSONAS

Persona 1: The Organiser

Name: Chloe Tan
Age: 24

Background:
Chloe is a ***young working professional*** living in a shared condo apartment with three other roommates in Singapore. She is ***highly familiar with digital tools*** and often uses apps such as Telegram, Google Sheets, Notes, and Notion to coordinate shared household matters. Within the house, she naturally takes on the role of the ***organiser***, keeping track of bills, assigning chores, and reminding others about deadlines and responsibilities. Although she values fairness and efficiency, she often ***feels burdened*** by being the one who has to keep everything running smoothly.

Goals:
- Maintain a fair and well-organised shared household
- Ensure that bills, chores, and responsibilities are completed on time
- Reduce the time and mental energy spent coordinating house logistics
- Preserve a harmonious relationship with roommates without constant confrontation

Pain Points:
- **Fragmented tools**: She has to switch between multiple platforms such as Telegram for communication, Google Sheets for expense tracking, and calendar apps for deadlines

- **Poor trackability**: It is difficult to clearly see who has completed tasks and who has not
- **Social friction**: Repeatedly chasing roommates for payments or chores feels awkward and emotionally draining
- **High mental load**: Managing the house requires significant time, effort, and cognitive energy

Needs from Our Desktop Interface:
- A single centralized platform for chores, bills, deadlines, and announcements
- Automated reminders that reduce the need for personal nagging
- Clear visibility into task completion and contribution levels
- A transparent system that increases accountability while reducing interpersonal tension

Primary Services Used: (***subject to changes***)
- Shared expense tracking
- Chore assignment and monitoring
- Bill reminders and deadline tracking
- Household announcements and updates

Persona 2: The Follower

Name: Ryan Lim
Age: 22
Background:
Ryan is a **university student** living in an HDB flat with two other roommates in Singapore. He is comfortable using everyday messaging apps like WhatsApp or Telegram, but he ***does not usually rely on productivity tools*** such as spreadsheets or task managers. In the household, he tends to be a ***passive participant***: he responds when asked, but rarely takes initiative to coordinate chores, finances, or schedules. He values convenience and prefers systems that require little effort to use.

Goals:
- Keep up with household responsibilities without spending too much effort managing them
- Know clearly what he needs to do and when he needs to do it
- Avoid uncomfortable situations where roommates have to repeatedly remind him
- Contribute adequately without dealing with complicated coordination systems

Pain Points:
- **Hard-to-access information:** Important reminders and agreements often get buried in busy group chats
- **Lack of clarity:** He is sometimes unsure about which chores or payments he is responsible for
- **Low engagement with existing tools:** He does not want to check multiple apps or maintain detailed tracking systems
- **Social friction:** Being personally reminded multiple times by roommates feels uncomfortable and pressuring

Needs from Our App:
- A simple dashboard that clearly shows his assigned tasks, bills, and deadlines
- Non-intrusive automated reminders that do not feel personal or confrontational
- Easy access to household information without searching through chat history
- A low-effort system that helps him stay on track with minimal input

Primary Services Used: ***(subject to changes)***
- Personal task and bill overview
- Automated reminders

- Simplified household updates
- Clear accountability for assigned responsibilities

USER JOURNEY MAPS

We use a shared Figma board to do user journey maps.
The link is attached below:
